

## **IAAO Course 331 - Mass Appraisal Practices and Procedures**

This course is designed to build on the subject matter covered in Course 300 - Fundamentals of Mass Appraisal - and prepare the student to take the more advanced mass appraisal courses. It teaches the student how to use Excel and SPSS to analyze data and apply it. Much of the emphasis will be on data accumulation and analysis, primarily directed toward the cost approach. Along the way, the student will learn how to use the graphing and analysis tools within Excel for ratio studies, in addition to supporting existing cost schedules or building new ones.

Text:	<i>Mass Appraisal of Real Property</i> (grey book) - \$50
