

Evaluating Commercial Construction – AQB Certified

This course shows how light industrial, office, and retail buildings are assembled and then may deteriorate over time. More than 1,250 construction images and a 150-page reference manual illustrate site improvements, structure, envelope, interior and environmental system components of a commercial building, and how these elements can affect value.

The educational objectives of this unique, two-day program are to:

- Present prevailing commercial construction techniques and associated terminology
- Display the typical combinations or commercial construction assemblies and systems
- Illustrate where to look for potential physical deficiencies that may be hidden from view
- Enhance the seminar participants' confidence to ask articulate construction-related questions as part of future due diligence inquiries

Text: *Evaluating Commercial Construction* - \$30

Instructor: James C. Canestaro, AIA, AICP

Location: Auditorium in Central Plaza – Washington Group Complex

Dates: Tuesday, July 23 – Wednesday, July 24

Hours: 15
