

Advanced Fundamentals of Querying

In this hands-on workshop you will create advanced SQL queries and manipulate and index tables. Topics include:

- Code subqueries to generate query output
- Manipulate table data by inserting, updating, and deleting records in a table
- Create a simple table, create tables with constraints, modify the table structure, and delete tables
- Create views, manipulate data through views, modify the view structure, and drop views
- Create indexes on table columns and drop inefficient indexes

Text: *SQL: Advanced Fundamentals of Querying 2008* - \$35
Recommended: Basic introductory SQL skills and familiarity with concepts related to database structure and terminology

Instructors: ExecuTrain
Dates: Thursday, January 14
Location: Central Training Room (CPT) in Central Plaza – Washington Group Complex
Hours: 7
Note: Class size is limited to 15 students.
