

Fundamentals of Querying - SQL

This hands-on workshop will help you use Structured Query Language (SQL) as a tool to implement logic and define instructions to assist you in retrieving data from databases.

Topics include:

- Connect to the SQL Server database and execute a simple query
- Include a search condition in a simple query
- Use various functions, based on the data types, to perform calculations on data
- Organize the data obtained from the query before it is displayed on the screen
- Retrieve data by combining information from multiple tables
- Format the output, save the result, and generate a report

Text:	<i>SQL: Fundamentals of Querying 2008</i> - \$35
Recommended:	Familiarity with concepts related to database structure and terminology
Instructors:	ExecuTrain
Dates:	Wednesday, January 13
Location:	Central Training Room (CPT) in Central Plaza – Washington Group Complex
Hours:	7
Note:	Class size is limited to 15 students.
