

DFB026
DEFERRED TAX – LATE CHARGE APPLIED

PROGRAM FUNCTION:

This program applies a late charge to deferred tax parcels.

REQUIRED RESPONSES SUPPLIED BY OPERATOR:

- 01 Tax Year (YYYY)
- 02 Tax Month (MM)
- 03 Detail or Summary? (D or S)
- 04 Update the Taxmaster file? (Y or N)
- 05 Limits

COMMENTS:

None.

OUTPUT SUMMARY (or NA):

The detail report lists the parcel number, name, bill number, tax code area, tax due, late charge, total parcel count and limits.

The summary report provides a Total Page for each code area. Each Total Page includes tax due totals, late charge totals and net due totals for all taxing units, specials, and tax code areas.

SPECIAL CONSIDERATIONS:

This report calculates a late charge per parcel, and then spreads that late charge to each taxing district before processing the next parcel.

If you receive an error message saying that the H1 indicator is on, you have entered an invalid year. Cancel the program and start over.

If a parcel has had a late charge applied to it during receipting, it will not be recalculated, but its totals will be included so that the charge will include all parcels.
