

MSB005
COPY SPOOLED FILE TO TAPE

PROGRAM FUNCTION:

This program provides the user with a method of copying a spooled file to a tape.

REQUIRED RESPONSES SUPPLIED BY OPERATOR:

Before going to these prompts, go to your spool file (WRKSPLF), find the report you want to copy to tape, and put an 8 in the option and enter. Take a print screen of this information – it will help you answer prompts #05-09 below:

- 01 Put a tape in the tape drive
- 02 Enter the name of the Tape Device (usually 'TC')
- 03 Do you want to initialize the tape? (Y or N)
- 04 If "Y" to initialize tape, enter volume name
(Need to give it a name – Max of 6 characters)
- 05 Enter spool file name (File)
- 06 Enter the Job Name of the spooled file (Job)
- 07 Enter the User name of the spooled file (User)
- 08 Enter the Job number of the spooled file (Number)
- 09 Enter the spooled file number (File Nbr)

COMMENTS:

When this program is executed, it creates file SPLF01 in Library QGPL. SPLF is subsequently cleared and reloaded each time a spool file is copied to tape.

If you are saving several spool files to the same tape, only initialize the tape the first time through. If you initialize on the 2nd pass, it will wipe out your first saved spool file.

OUTPUT SUMMARY (or NA):

None

SPECIAL CONSIDERATIONS:

None
